

BRAVE

Boosting Revenue through AI Value Engineering

Product Requirements Document

BRAVE Program Dashboard | Version 3.0 — Final

April 2025 • NIAT • Confidential

7,500 Students • 19–20 Campuses • ₹33.75 Crore Target

3 Roles • Replit Stack • Admin-Verified Revenue

Decisions Log

All product decisions are confirmed and locked. This section is the single source of truth for the build team.

Platform / Stack	Replit — Node.js + React (Vite) frontend, PostgreSQL (Neon), Replit Auth, Replit Deployments
User Roles in Scope	3 roles: Students / Teams • Campus Coordinators • NIAT Admins (Investors / VCs: OUT OF SCOPE for v1)
Revenue Verification	Single-stage: Student uploads proof → NIAT Admin reviews and approves → Revenue appears on leaderboard
Leaderboard Access	Authentication required — leaderboard is visible to logged-in users only; no public URL
Student Identity Verification	NIAT provides student roster; registration validated against roster by system before coordinator approval

Team Membership	One team per student strictly enforced — system-level constraint; cannot join or create a second team
Team Re-registration	Rejected teams may re-register; Admin has full edit rights over team name, members, and all team info at any time
Revenue Display	Two figures per project: Order Book (committed ₹) and Revenue Received (banked ₹). Leaderboard ranks by cumulative verified Revenue Received across all projects. Order Book shown as context only.
Teams Per Campus	Open-ended — no cap on number of active teams per campus
Admin Revenue Edit	Admins can create, edit, or adjust revenue entries from the backend; all changes logged in audit trail
Platform Lifetime	Platform remains live indefinitely after July 15, 2025 — no sunset; data preserved for GRIT Finale and alumni tracking
Note on Investor Access Investor / VC access is out of scope for v1. Demo Day materials are still collected from teams and can be exported by admins for offline VC sharing. A v2 investor portal can be added without changing the data model.	

1. Introduction

1.1 Purpose

This document defines the product requirements for the BRAVE Program Dashboard — a Replit-hosted web application that serves as the operational backbone of NIAT's 3-month entrepreneurship programme. It enables student teams to register, submit ideas, log revenue, and track their progress; gives campus coordinators visibility over their campus; and gives NIAT admins centralised control over approvals, verification, and the national leaderboard.

1.2 Background

BRAVE runs from April 15 – July 15, 2025, across 19–20 NIAT campuses, targeting 7,500 students organised into teams of 2–4. The programme's primary credential is verified revenue generated by selling AI-powered solutions to local SMBs. The dashboard makes this revenue-

first philosophy transparent, accountable, and motivating — with a live leaderboard that only reflects money that has actually been earned and verified.

1.3 Goals

- Single platform for all student, coordinator, and admin interactions
- Verified-only leaderboard — no revenue appears publicly until admin-approved
- Fast onboarding: teams should be able to register and submit their first idea within 15 minutes of account creation
- Mobile-first responsive design — majority of students access via phone
- Replit-native stack for fast iteration and easy deployment by NIAT's tech team

1.4 Non-Goals (v1)

- Investor / VC portal — deferred to v2
- Native mobile app — responsive web only
- WhatsApp notification integration — deferred to v2
- Integration with NIAT's existing LMS or ERP systems
- Code hosting, IDE, or project infrastructure for student builds

2. User Roles & Permissions

Role	Who They Are	Key Capabilities	Data Scope
Student / Team Member	NIAT-enrolled students in teams of 2–4	Register team, submit idea, log revenue with proof, view leaderboard, track milestones	Own team data + public leaderboard
Campus Coordinator	1 designated staff per campus (19–20 total)	Approve team registrations, monitor all teams on their campus, view campus analytics, send campus announcements	All teams on their assigned campus
NIAT Admin	Central programme managers at NIAT HQ	Full platform access — approve/reject revenue, manage all users, configure programme settings, control leaderboard, run reports	All campuses, all teams, system config

Role Hierarchy

NIAT Admin > Campus Coordinator > Student. Admins can perform all coordinator actions. Coordinators cannot access other campuses' data or perform admin-level revenue approvals.

3. Functional Requirements

3.1 Authentication

- Replit Auth used for student accounts (OAuth via Google/GitHub supported natively)
- Campus coordinators and NIAT admins: email + password accounts pre-created by admin; no self-registration
- All users land on a role-specific dashboard after login
- Role is assigned server-side and stored in DB — not editable by the user
- Password reset via email OTP for coordinator/admin accounts
- Session: 8 hours for students, 24 hours for coordinators/admins

3.2 Team Registration & Coordinator Approval

Team registration is a two-step gated flow — teams are not visible on the leaderboard until a campus coordinator approves them.

Registration Flow

Student signs up → Creates/joins team → Fills registration form → Submitted to Campus Coordinator → Coordinator approves or requests changes → Team becomes Active and appears on leaderboard at ₹0.

Registration Form

Field	Type	Required	Validation
Team Name	Text (60 chars)	Yes	Unique per campus; no special characters
Campus	Dropdown	Yes	Auto-set from account; cannot be changed post-submission
Team Leader	Auto (logged-in user)	Yes	Pulled from account; not editable
Additional Members (1–3)	Email entry	No	Each must have a BRAVE account; invited via email
Team Roles	Multi-select	No	Tech Lead, Sales Lead, Client Success, Product Owner
Team Tagline	Text (120 chars)	No	Displayed on leaderboard card
Team Photo / Logo	Image upload	No	Max 2 MB, JPG/PNG; shown on profile

Coordinator Actions

- Approve — team becomes Active; appears on leaderboard at ₹0
- Request Changes — coordinator adds a comment; team is notified to edit and re-submit
- Reject — mandatory reason required; team leader is notified
- Bulk Approve — approve all pending registrations on a campus in one click

3.3 Projects

Teams can create and manage multiple live projects simultaneously. There is no idea submission, no approval gate, and no limit on the number of projects a team can run. Projects are the atomic unit of work — all financial tracking happens at the project level.

Core Model

A team has many Projects. Each Project has an Order Book (₹ committed by clients) and Revenue Received (₹ actually in the bank). Both are tracked and verified independently per project. The leaderboard aggregates Revenue Received across all of a team's projects.

Creating a Project

Field	Type	Required	Notes
Project Title	Text (80 chars)	Yes	Name of the product or engagement, e.g. 'WhatsApp Bot for Dr. Mehta Clinic'
Project Description	Textarea (500 chars)	Yes	What is being built, for whom, and what problem it solves

- Any team member can create a new project at any time — no coordinator or admin approval needed
- Projects can be edited freely by the team at any time
- A project can be marked Inactive by the team (e.g., client dropped); inactive projects retain their financial history but are visually distinguished on the team profile
- Admin can archive or delete a project with a logged reason

3.4 Order Book & Revenue Received

Each project tracks two distinct financial figures. Both are entered by the team and verified by a NIAT Admin before appearing on the leaderboard and team profile.

Component	Definition	What It Represents
Order Book (₹)	Total value of signed/committed	Money that has been committed by the client

Component	Definition	What It Represents
	work orders or agreements from clients for this project	but may not yet be in the bank — e.g., a signed contract for ₹40,000 of which ₹15,000 has been paid so far
Revenue Received (₹)	Total amount actually received in the team's bank account for this project	Cash in hand — the verified, bank-confirmed amount. This is the figure that counts on the leaderboard and Demo Day eligibility.

Leaderboard Rule

Only Revenue Received (verified) contributes to the leaderboard ranking and Demo Day eligibility threshold. Order Book is shown on team profiles for context but does not count toward the ₹2,00,000 Demo Day threshold.

Submitting / Updating Financials per Project

Teams update Order Book and Revenue Received as separate actions, each requiring admin verification before the figure goes live.

Order Book Update — Submission Fields

Field	Type	Required	Notes
Project	Auto (linked to the project)	Yes	Entry is always tied to a specific project
Order Book Amount (₹)	Number	Yes	Total committed value of the order/contract
Client Name	Text (100 chars)	Yes	Name of the client business
Supporting Document	File upload	Yes	Signed agreement, purchase order, email confirmation, or scope document — PDF or image, max 5 MB
Notes	Textarea (200 chars)	No	Any relevant context for the admin reviewer

Revenue Received Update — Submission Fields

Field	Type	Required	Notes
Project	Auto (linked to the project)	Yes	Entry is always tied to a specific project
Amount Received (₹)	Number	Yes	Gross amount received in this payment; multiple payments for same project each get

Field	Type	Required	Notes
			their own entry
Payment Date	Date picker	Yes	Date the payment was received in the bank
Payment Proof	File upload	Yes	Bank statement screenshot or UPI/payment app screenshot confirming credit; sensitive fields may be redacted
Invoice or Scope Document	File upload	Yes	PDF or image, max 5 MB — confirms what work this payment is for
Client Testimonial	File upload or URL	No (required by Demo Day)	Short video (30–120 sec) or YouTube/Drive link; encouraged from first payment
Notes	Textarea (200 chars)	No	Any relevant context for the admin reviewer

Financial Entry States

State	Meaning	Visible To	Counts on Leaderboard?
Draft	Saved by team, not yet submitted for review	Team only	No
Submitted	Awaiting NIAT Admin review	Team + Admins	No
Verified	Admin approved; amount confirmed	Everyone	Yes (Revenue Received only)
Rejected	Returned with admin comments; team can correct and re-submit	Team + Admins	No

Admin Review Interface

- Single queue for all pending financial entries (Order Book updates and Revenue Received updates) across all teams
- Queue shows: team name, campus, project title, entry type (Order Book / Revenue Received), amount, submission date; sorted oldest first
- Admin opens an entry to view all uploaded documents inline — PDF viewer, image viewer, video player
- Approve: admin can adjust the verified amount with a mandatory note if it differs from the submitted amount
- Reject: admin must enter a comment; entry returns to Draft state for team to correct and re-submit
- SLA target: 48-hour turnaround; overdue entries flagged in the queue and admin notified

- Admin can add a financial entry directly on behalf of a team from the backend (e.g., offline deal with tech issues) — all such entries are tagged 'Admin-entered' in the audit log
- Admin can edit or flag any verified entry for re-review; flagged entries are paused from totals pending re-confirmation

Project Financial Summary — Per Project View

- Order Book Total: sum of all verified order book entries for this project
- Revenue Received Total: sum of all verified revenue received entries for this project
- Payment history: chronological list of all verified revenue entries for this project
- Outstanding (Order Book minus Revenue Received): shows how much committed revenue is yet to be collected
- All figures update in real time as admin approvals come through

Team Financial Summary — Aggregated

- Total Order Book (₹): sum of verified order book across all active projects
- Total Revenue Received (₹): sum of verified revenue received across all active projects — this is the leaderboard figure
- Active Projects count
- Progress bar: Total Revenue Received vs ₹2,00,000 Demo Day threshold

3.5 Live Leaderboard

The leaderboard is the programme's primary motivation engine. It ranks teams by total verified Revenue Received across all their projects, and updates within 5 minutes of any admin approval.

Leaderboard Views

View	Scope	Default Sort	Filters Available
National	All campuses	Total Revenue Received ↓	Campus, This Week, This Month, All Time
My Campus	Current user's campus	Total Revenue Received ↓	Week, Month, All Time
My Team	Own team only	Project breakdown + payment log	Project, date range
Top 10 National	Top 10 teams nationally	Revenue Received ↓	Fixed — no filters

Leaderboard Card — Per Team

- Team name + campus + national rank
- Total Revenue Received (₹) — verified, across all projects — large and prominent
- Total Order Book (₹) — verified, across all projects — shown secondary to revenue
- Number of active projects
- Number of clients (distinct client names across all projects)
- Progress bar: ₹0 → ₹2,00,000 Demo Day threshold (based on Revenue Received only)
- Demo Day Eligible badge — auto-appears when Revenue Received crosses ₹2,00,000
- Last payment date

Team Profile Drill-Down (on click)

- Full list of all active projects with per-project Order Book and Revenue Received totals
- Each project expandable to show individual verified payment entries with dates
- Milestone timeline

Admin Leaderboard Controls

- Freeze leaderboard — locks a snapshot (e.g., at programme end); new approvals do not update the frozen view
- Hide team — removes from public view for integrity investigations; team is not notified
- Feature a team — pins to top with 'Featured' banner; max 3 featured at a time
- Export — full leaderboard to CSV or PDF at any point in time

3.6 Team Milestone Timeline

Every team has a personal timeline — a chronological record of their journey. Visible to the team, their coordinator, and admins.

Auto-Generated Milestones (System)

Milestone	Trigger
Team Registered	Coordinator approves team registration
First Project Created	Team creates their first project
First Order Book Entry Verified	Admin verifies first Order Book entry across any project
First Revenue Received Verified	Admin verifies first Revenue Received entry across any project
₹50,000 Revenue Reached	Cumulative verified Revenue Received crosses ₹50,000

Milestone	Trigger
₹1,00,000 Revenue Reached	Cumulative verified Revenue Received crosses ₹1,00,000
Demo Day Eligible — ₹2,00,000 Reached	Cumulative verified Revenue Received crosses ₹2,00,000
Demo Day Application Submitted	Team submits Demo Day application

Manual Milestones (Team-Logged)

- Teams can add custom milestones at any time: title, date, description (200 chars), optional image or link
- Examples: 'First client meeting', 'Launched WhatsApp bot', 'Third client signed'
- Coordinators can pin a milestone to highlight it on the team's profile
- Manual milestones do not affect revenue or leaderboard — they are narrative/motivational

3.7 Demo Day Preparation

Demo Day is end of July 2025. Teams with ₹2,00,000+ in verified revenue are eligible to apply. The platform collects all required materials from teams and gives admins tools to manage the event. Investor access is out of scope for v1 — materials collected here are used by NIAT HQ to manage the investor event offline.

Note

Since investor access is not in v1, Demo Day materials are admin-facing only. Admins can download/export team portfolios for sharing with VCs via email or a separate investor portal if needed.

Demo Day Application — Team Submission

Required Material	Format	Source
Revenue proof	Auto-pulled from verified revenue log	System — no additional upload
Client testimonial videos (min 2)	Links or uploads	Already on file from revenue submissions
Live product demo	URL or video upload (max 500 MB)	New upload by team
10-slide pitch deck	PDF or PPTX	New upload; NIAT template provided
Growth plan	Textarea (1000 chars) + optional attachment	New entry by team

Admin Demo Day Controls

- Set application open and close dates
- View all eligible teams (₹2L+ verified) and their application status
- Shortlist teams for presentation slots; assign order and time
- Export team portfolio as PDF — auto-compiled from profile, revenue log, pitch deck, and demo link
- Download all pitch decks in bulk (ZIP)

4. Admin Capabilities

4.1 User Management

- Create, edit, and deactivate campus coordinator accounts
- Assign coordinators to campuses (each coordinator is tied to one campus)
- View all student accounts; deactivate accounts if required (e.g., dropout)
- Force-reassign a student from one team to another (with logged reason)
- Full audit log of all admin actions — immutable, viewable in settings

4.2 Programme Configuration

- Set programme start/end dates and phase labels
- Configure Demo Day eligibility threshold (default ₹2,00,000 — editable)
- Enable/disable public leaderboard (e.g., freeze during review periods)
- Manage incentive tier thresholds and labels (for display on student dashboard)
- Broadcast announcements — to all users, a specific campus, or a specific team

4.3 Reporting & Analytics

Report	Granularity	Export
Total Revenue Received (verified)	National / per campus / per team / by week / by month	CSV, PDF
Total Order Book (verified)	National / per campus / per team	CSV
Revenue pipeline	Submitted (unverified) vs Verified vs Rejected — by campus	CSV
Project activity	Active projects per team, new projects created per week	CSV
Team status breakdown	Active / Pending Approval / No Projects Yet / Demo Day Eligible	CSV

Report	Granularity	Export
Demo Day eligibility tracker	All teams crossing ₹2L Revenue Received, with application status	CSV, PDF
Admin review queue health	Average approval time, overdue count, rejection rate	CSV
Revenue by campus over time	Weekly Revenue Received per campus — trend view	CSV

5. Notifications

All v1 notifications are delivered via in-app notification bell and email. WhatsApp is a v2 feature.

Event	Who Gets Notified	Channel
Team registration submitted	Campus Coordinator	In-app + Email
Team registration approved	Team Leader	In-app + Email
Team registration rejected / changes requested	Team Leader	In-app + Email
New project created by team	Campus Coordinator	In-app
Order Book entry submitted for review	All NIAT Admins	In-app + Email
Order Book entry verified	Team Leader	In-app + Email
Order Book entry rejected	Team Leader	In-app + Email (with admin comments)
Revenue Received entry submitted for review	All NIAT Admins	In-app + Email
Revenue Received entry verified	Team Leader	In-app + Email
Revenue Received entry rejected	Team Leader	In-app + Email (with admin comments)
Financial entry idle > 48 hours in queue	All NIAT Admins	In-app + Email
Team crosses ₹2L Revenue Received — Demo Day eligible	Team Leader + Campus Coordinator + Admins	In-app + Email
Leaderboard rank change — into Top 10 nationally	Team Leader	In-app
Demo Day applications open	All active teams with ₹2L+ Revenue Received	In-app + Email

Event	Who Gets Notified	Channel
Announcement broadcast	Targeted users (all / campus / team)	In-app + Email

6. Technical Architecture (Replit-Native)

All infrastructure runs on Replit. The stack is chosen for fast iteration, zero DevOps overhead, and easy handoff to NIAT's tech team.

6.1 Recommended Stack

Layer	Technology	Why
Frontend	React (Vite)	Fast SPA; Replit has excellent React support; mobile-responsive with Tailwind CSS
Backend	Node.js + Express	Lightweight REST API; native to Replit; handles file uploads and auth middleware easily
Database	PostgreSQL (Replit DB or Neon)	Relational model fits the approval workflow and revenue log well; Neon is serverless and Replit-compatible
Authentication	Replit Auth (OpenID Connect)	Zero-config for student accounts; coordinators/admins use email+password via Passport.js
File Storage	Cloudflare R2 or Replit Object Storage	For bank statements, testimonial videos, pitch decks; presigned URLs for secure access
Email Notifications	Resend (or SendGrid)	Simple API; free tier sufficient for programme volume
Hosting	Replit Deployments (Autoscale)	One-click deploy; handles traffic spikes on leaderboard refresh

6.2 Data Model — Core Entities

Entity	Key Fields	Relationships
User	id, name, email, role (student/coordinator/admin), campus_id, created_at	Belongs to Campus; has many TeamMemberships
Campus	id, name, city, state, coordinator_id	Has many Teams, has one Coordinator
Team	id, name, campus_id, leader_id, status (pending/active/rejected), tagline, photo_url, created_at	Belongs to Campus; has many TeamMembers, many Projects, many Milestones

Entity	Key Fields	Relationships
Project	id, team_id, title, description, status (active/inactive), created_by, created_at, updated_at	Belongs to Team; has many OrderBookEntries and RevenueEntries
OrderBookEntry	id, project_id, team_id, client_name, amount, verified_amount, status (draft/submitted/verified/rejected), supporting_doc_url, admin_notes, submitted_at, verified_at	Belongs to Project and Team
RevenueEntry	id, project_id, team_id, client_name, amount, verified_amount, payment_date, status (draft/submitted/verified/rejected), payment_proof_url, invoice_url, testimonial_url, notes, admin_notes, submitted_at, verified_at, entered_by (student/admin)	Belongs to Project and Team
Milestone	id, team_id, type (auto/manual), title, description, date, image_url, link_url, is_pinned	Belongs to Team
DemoDayApplication	id, team_id, demo_url, pitch_deck_url, growth_plan, status, submitted_at	Belongs to Team; one per team
Announcement	id, author_id, target (all/campus/team), campus_id, team_id, title, body, created_at	Polymorphic target

6.3 File Upload Guidelines

- All files uploaded to object storage; URLs stored in DB — never store binaries in PostgreSQL
- Bank statements and payment proof: private presigned URLs (expire in 24h); accessible only to the submitting team and admins
- Testimonial videos and pitch decks: can be served via public URL after admin approval
- Max file sizes: documents 5 MB, images 2 MB, videos 200 MB
- Accepted formats: PDF, JPG, PNG for documents; MP4, MOV for video; PPTX, PDF for pitch decks

6.4 Security

- RBAC enforced server-side on every API route — never rely on client-side role checks
- Students can only read/write their own team's data; campus-scoping enforced on all coordinator queries
- All admin write actions (approvals, rejections, adjustments) written to an immutable audit_log table

- File access for sensitive documents (bank statements) gated behind auth + role check, not direct URLs
- Input validation and sanitisation on all form fields — parameterised queries only (no raw SQL)

7. Information Architecture

Student / Team — Page Map

Page / Section	Key Content & Actions
Home Dashboard	Revenue Received total, Order Book total, national + campus rank, progress bar to ₹2L, active projects count, pending submission statuses, announcements
Team Profile	Edit team info, manage team members, milestone timeline, public profile preview
Projects	List of all projects — create new project, view/edit project details, per-project Order Book and Revenue Received totals, add new financial entries, submission history with status badges
Leaderboard	National and campus views, filters, search by team name, Top 10 panel, team drill-down
Demo Day	Eligibility check, application form, upload pitch deck and demo link, submission status
Notifications	Inbox of all alerts with read/unread state
Settings	Account details, email preferences, team member management

Campus Coordinator — Page Map

Page / Section	Key Content & Actions
Campus Dashboard	Campus total verified revenue, team count by status, pending registrations count, top 5 teams, recent activity feed
Team Management	List all campus teams with status, search, filter, approve/reject registrations, view individual team profiles and idea submissions
Campus Leaderboard	Campus-only leaderboard view with filters
Announcements	Send campus-wide or team-specific announcements
Reports	Campus-scoped analytics — revenue by week, client acquisition rate, team status breakdown — CSV export

NIAT Admin — Page Map

Page / Section	Key Content & Actions
National Dashboard	Programme KPIs — total verified revenue, active teams, Demo Day eligible count, pending review count, revenue by campus chart
Revenue Approval Queue	All Submitted entries oldest-first, inline document review, approve/reject with notes, overdue flags
All Teams	Search/filter across all campuses, view any team, override data, manage visibility on leaderboard
Leaderboard Controls	Freeze, feature teams, hide teams, export
Demo Day Manager	Eligibility list, applications, shortlisting, time slot assignment, portfolio PDF export, bulk pitch deck download
User Management	Coordinator accounts, student accounts, bulk actions
Programme Config	Dates, thresholds, incentive tiers, announcements
Reports & Analytics	All national and per-campus reports, CSV/PDF export
Audit Log	Immutable log of all admin write actions

8. Phased Delivery Plan

Priority Constraint

Phase 1 must be live by April 15, 2025 — programme launch day. Phases 2–4 are layered on top without breaking existing data.

Phase	Scope	Target
Phase 1 — Launch (MVP)	Auth (Replit Auth + email/password), Team Registration + Coordinator Approval, Idea Submission, Basic Revenue Submission (no workflow — stored, pending admin action), Admin Revenue Approval Queue (simple approve/reject), Leaderboard (verified revenue only), Role-based dashboards (student, coordinator, admin)	April 15, 2025
Phase 2 — Verification & Notifications	Automated revenue state machine (Draft → Submitted → Approved/Rejected), In-app notification bell + email notifications for all triggers, 48-hour SLA flag in admin queue, Revenue history log with MRR tracking, Progress bar to ₹2L on student dashboard	April 30, 2025
Phase 3 — Engagement & Analytics	Milestone timeline (auto + manual), Leaderboard filters (segment, week/month, campus), Admin leaderboard controls (freeze, feature, hide, export), Campus coordinator reports (CSV), Announcement broadcasts, Mobile UX refinement	May 15, 2025

Phase	Scope	Target
Phase 4 — Demo Day	Demo Day application module, Admin Demo Day manager (shortlisting, time slots), Portfolio PDF auto-export, Bulk pitch deck download, National programme analytics dashboard, Audit log UI	July 1, 2025

9. Implementation Constraints & Edge Cases

All open questions are resolved. This section documents the specific rules the build team must implement correctly.

9.1 Student Identity & Team Membership Rules

Rule	Implementation Detail
Roster validation on signup	NIAT uploads a CSV (student_id, name, email, campus) before April 15. On registration, the student's email is checked against this roster. No match = registration blocked with a message to contact their campus coordinator.
One team per student — hard constraint	The teams_members table enforces a unique constraint on student_id. The UI hides the 'Create Team' and 'Join Team' buttons once a student is in any team. API also rejects any attempt server-side.
Team leader cannot leave without transferring leadership	If the team leader tries to leave or is removed by admin, the system prompts admin to assign a new leader before proceeding.
Admin full edit rights	Admins can edit team name, swap members, change team leader, change campus assignment, and re-activate rejected teams — all with a mandatory reason field, logged to audit trail.
Re-registration after rejection	A rejected team's data is soft-deleted (status = 'rejected'). The same students can create a new team; the old entry remains in the DB for audit purposes.

9.2 Revenue & Order Book Rules

Rule	Implementation Detail
Two separate financial figures per project	Order Book and Revenue Received are stored in separate tables (order_book_entries, revenue_entries), each with their own verification workflow. They are never merged or confused — aggregated separately in all views.
Leaderboard uses Revenue Received only	The leaderboard rank, Demo Day eligibility threshold, and all milestone triggers are based solely on the sum of verified

Rule	Implementation Detail
	revenue_entries.verified_amount per team. Order Book figures are displayed as supplementary context, never used in ranking calculations.
Cumulative / lifetime totals only	Revenue Received and Order Book totals are the sum of all verified entries ever. No weekly resets, no expiry. Amounts are permanent once verified.
Multiple payments per project	A single project can have many Revenue Received entries (e.g., monthly maintenance payments, milestone payments). Each is submitted and verified separately. The project total is the sum of all verified entries.
Admin revenue operations	Admins can: (a) adjust verified_amount on any entry with a note, (b) add an entry on behalf of a team (tagged 'Admin-entered'), (c) flag a verified entry for re-review which pauses it from totals. All three are audit-logged.
Rejected entry re-submission	A rejected entry returns to Draft. The student edits and re-submits. Original submission and rejection reason preserved in history.
Order Book vs Revenue consistency check	The system does not enforce that Revenue Received $\leq$ Order Book (a team may receive revenue before formalising a written order). Both figures are independently verified; any discrepancy is noted by the admin during review.
Demo Day threshold	₹2,00,000 verified Revenue Received (configurable by admin). Uses verified_amount, not student-submitted amount.

9.3 Platform Continuity Post-July 15

- The platform remains fully live and writeable after July 15, 2025 — no read-only mode, no sunset
- Programme phases and dates are configurable labels only — changing dates does not lock any feature
- Admin can create a new 'programme cohort' record to track future batches under the same platform
- All July 2025 cohort data (teams, revenue, milestones) is preserved indefinitely and filterable by cohort
- GRIT Finale tracking: Admin can tag Demo Day shortlisted teams with a 'GRIT Finalist' badge post-July; their profiles remain accessible
- Replit Deployments will be kept live; NIAT is responsible for maintaining the Replit subscription

9.4 Roster Management

- NIAT Admin uploads the student roster CSV via an admin UI panel before programme launch

- Roster format: student_id, full_name, email, campus_name
- Roster can be updated (re-uploaded or row-added) at any time — new entries are additive; existing entries are not overwritten
- If a student's email is not on the roster, they see: 'Your email is not registered for BRAVE. Please contact your campus coordinator.'
- Campus coordinators can manually whitelist a student (override roster) with admin approval — for late joiners or data errors

"The SMBs of India need you. Your skills can transform their businesses. Are you BRAVE enough to try?"

BRAVE Dashboard PRD v3.0 — Final • NIAT • Confidential • April 2025
